Ξ.	O. 1 Solve the following:		
₹		(CO-2)	_
â	•!	(1-00)	12 1
ı	Solve the following:		
3,₹		(C0-7)	: _ -
A	My Manuschess, with passic institution displays that manuschess. Write equations for Biot number & Fourier number. Aluminium sphere weighing 5.5 kg and initially at a temperature of 290°C is suddenly immersed in a fluid at 15°C. The convective heat transfer coefficient is 58 W/m²K. Estimate the time required to cool the aluminium to 95°C. Use lumped capacity method	(00-3)	·
!. :	for calculation. Assume following property values for aluminium: \[\rho = 2700 \text{ kg/m}^3 \] \[\k = 205 \text{ W/m K} \] \[\cdot \frac{1}{2} \text{ cp} = \frac{900 \text{ J/kg K}}{2} \]	,	:
ਨੂੰ ₹	Solve the following: Sketch laminar and turbulent boundary layers (BL) for flow over a flat plate. Also, show	8)	

State the value of Re at transition. turbulent region. Assume uniform velocity profile on the upstream side of the plate

Air at 60°C and atmospheric pressure flows over a thin flat plate (one side) which is 1 m $v = 18.96 \times 10^{4} \text{ m}^2/\text{s}, \rho = 1.06 \text{ kg/m}^3$ Use following values of fluid properties: velocity boundary layer at a distance x = 1.5 m and b) total drag force on the plate. wide and 2 m in length. The free stream air velocity is 1 m/s. Calculate a) thickness of Use following equations for thickness of velocity boundary layer and drag coefficient

and

Q.4 Solve the following:

Water at 50°C enters 1.5 cm diameter tube of a heat exchanger. Assume velocity of water (CO-4)

Calculate the exit water temperature if the length of tube is 2 m at mean temperature as 1 m/s. The tube surface is maintained at 90°C

Assume following properties of water at mean temperature (neglect variation in

properties with temperature):

Use following correlations: $\mu = 489.2 \times 10^{-6} \text{ kg/(m.s)}$ $c_p = 4178 \text{ J/kg/K}$ k = 0.656 W/m K $\rho = 984.4 \text{ kg/m}^3$

 $f = 0.079 Re^{-0.25}$

1+12.7 / /2 $(p_T^{2/3}-1)$

A 15 cm diameter horizontal iron pipe with 1 m length is exposed to saturated steam at (CO-4) surrounding surfaces (unaginary) are at 20°C. Assume outer surface of the pipe as black rate from the outer surface of pipe and compare it with radiant heat transfer rate if the 100°C on inside and still air at 20°C on outside. Calculate the convective heat transfer

show corresponding point on pool boiling curve.

Q. 5 Solve the following: B) Draw the pool boiling curve & identify different boiling regimes. Define critical flux & In a double-pipe counter-flow heat exchanger 10,000 kg/h of an oil having a specific (CO-5) b) Determine the heat exchanger area a) Determine LMTD 4180 J/kg.K. Assume overall heat transfer coefficient of 300 W/m2K and specific heat of water as heat 2095 J/kg K is cooled from 80°C to 50°C by 8000 kg/h of cooling water at 25°C Use following correlation for horizontal pipe: Use following values of properties of air at 60°C: $\mu = 20.1 \times 10^{-6} \text{ N.s/m}^2$ $Nu = 0.48 Ra^{0.25}$ k = 0.029 W/m K

Q. 6 | Solve the following:

A) Consider a 20 cm diameter spherical ball at 800 K suspended in air. Assuming the ball closely approximates a blackbody, determine: (0-6)

a) The total blackbody emissive power

The amount of radiant energy emitted by the ball in 5 min.

The monochromatic blackbody emissive power at a wavelength of 3

B) State various shape factor relations (algebra) in radiation heat transfer. *** End ***

DR. BABASAHEB AMBEDKAR TECHNOLOGICAL UNIVERSITY, LONERE – RAIGAD -402 103

Semester Winter Examination - Dec. - 2019

Branch: Mechanical Engineering. Subject: - Applied Thermodynamics - I (BTMEC502) Date:- 11/12/2019	Sem.:- V Marks: 60 Time:- 3 Hr.
Instructions to the Students 1. Each question carries 12 marks. 2. Attempt any five questions of the following. 3. Illustrate your answers with neat sketches, diagram etc., wherever nec 4. If some part or parameter is noticed to be missing, you may appropriate assume it and should mention it clearly	
Q.1 a) What is meant by term fuel? Classify fuels in detail.	(6)
b) Explain briefly, the method used to determine the higher calorific value	
Q 2 a) Describe with neat diagram, the construction and working of a Babcock	
b) The following observations were made in a boiler trial: Coal used 250kg of calorific value 29800kJ/kg, water evaporated 200 dryness fraction of steam 0.95 and feed water temperature 34°C Calcul "from and at 100°C" per kg of coal and the efficiency of the boiler	Okg, steam pressure 11.5 bar, ate the equivalent evaporation
Q.3 a) With pv and Ts diagram explain Carnot vapour cycle in detail b) Show the Rankine cycle on p-v and T-s diagrams and explain the proc	resses involved (6)
Q4 a) Dry saturated steam at a pressure of 15 bar enters in a nozzle and is disbar. Find the final velocity of steam, when the initial velocity of steam	is neglible. If 10% of the heat
drop is lost in friction, find the percentage reduction in the final velocity b) With h-s graph explain effect of friction between nozzle surface and st	y (6)
Q.5 a) In a De-layel turbine, the steam enters the wheel through a nozzle will an angle of 200 to the direction of motion of blade. The blade speed is rnoving blade is 250 Find the inter angle of moving blade, exit velocity work done per kg of steam.	s 200m/s and the exit angle of of steam, and its direction and
work done per kg of steam. b) What do you mean by compounding of the turbine. Draw the neat compounding with variation of pressure, velocity and specific volume.	sketch of the 3 stage velocity (6)
Q.6 a) With neat sketch and cycle representation explain the working of the co	entrifugal compressor. (6)
b) With neat sketches explain construction, working of Reciprocating air applications.	compressor with (6)

Winter Semester Examination - December - 2019

Branch: Mechanical Sem.:- V Subject with Subject Code: Machine Design -I(BTMEC503) Marks:60 Date: - 13/12/2019 Time:-3 Hr. Instructions to the Students 1. Each question carries 12 marks. 2. Attempt any five questions of the following. 3. Illustrate your answers with neat sketches, diagram etc., wherever necessary. 4. If some part or parameter is noticed to be missing, you may appropriately assume it and should mention it clearly (Marks) Q.1. Any two a) Define Machine Design. Explain various design considerations (6)b) Explain Aesthetic consideration in design with sketches. **(6)** c) Explain ergonomics consideration in design of control & display. (6)Q.2. Any Two a) The load on a bolt consists of an axial load of 10 KN together with transverse shear force of 5 KN. Find the diameter of bolt required according to maximum shear stress theory. The permissible tensile stress at elastic limit =100MPa, and ∵F.S.**≓**1 (6)b) Cotter joint to support a load of 30 KN. The material used is plain carbon steel with stresses, Tensile stress = 50 MPa, Shear stress = 35 MPa, Crushing stress = 100 MPa Find 1)Diameter of rod ,d 2)Diameter of spigot end,d2 3) Width of cotter, b 4) Thickness of cotter, t 5) Diameter of socket (6)c) Write design process of knuckle joint with suitable sketches **(6)** Q.3. Any two a) What is stress concentration? What are the causes of stress concentration & remedies for stress concentration. (6)

		Kirkusa Ta
	b)Define(any three)	•
	1)Fatigue failure, 2)Endurance limit, 3)Notch sensitivity, 4)Reverse	
	5)Repeated stress	(6)
	c) A steel rod subjected to reversed axial load of 180 KN. Find the dia	
	rod if F.S.= 2, Ultimate strength = 1070MPa, Yield strength=9	
	Endurance strength = half of ultimate strength, Ka=0.8, Kb=0.85,	κυ-υ., (6)
	Kf=1.	
ΩA	. Any two	and the second
Q.4.	a) Find the diameter of solid steel shaft to transmit 20KW at 200 rpm. T	he safe
	shear stress = 45MPa. If hollow shaft is to be used in place of solid shaft	t, find
	the inside & outside diameter when ratio of inside to outside diameter is	
		(6)
	b) Prove that crushing stress is twice the shear stress when key is equal	y strong
	in crushing & shearing and also give sketches.	(6)
	c) Design muff coupling to transmit 40KW at 350 rpm. For shaft & key	
	stress=40MPa, Crushing stress=80MPa, For muff-Shear stress=15MP	a. (6)
Q.5	5. Any two	
	a) A vertical two start square threaded screw of 100mm mean diameter	
	mm pitch supports a vertical load of 18 KN. The axial thrust on the	
	taken by collar bearing of 250 mm outside diameter and 100 mm diameter. Find the force required at the end of lever which is 400mm	
	order to lift or to lower the load $\mu=0.15\&\mu1=0.20$.	1 10116 111
	order to trie of to fower the road product of the order	(6)
	b)A plate 100mm wide and 10 mm thick is to be welded to another	` '
	means of double parallel fillet weld. The plates are subjected to static le	oad of 80
	KN. Find the length of weld if shear stress = 55MPa.	(6)
	c) Explain with sketch bolt of uniform strength.	(6)
Q.	the state of the s	
	a)Define the terms related to springs	
	1)Solid length 2)Free length	(6)
	3)Spring index 4)Spring rate.	(6)
	10 David of the tight hammagion arrive for a maximum land of 1000N	for a
	b) Design a helical compression spring for a maximum load of 1000N deflection of 25 mm. Using spring index =5, Shear stress = 420MPa.	
V	Modulus of rigidity = 84000 MPa, consider effect of stress concentrations	
	Migains of lightly — 64000 land, consider effect of suces concentre

DR. BABASAHEB AMBEDKAR TECHNOLOGICAL UNIVERSITY, LONERE – RAIGAD -402 103

Winter Semester Examination - December - 2019

Branch: B. Tech Mechanical

Sem.:- V

Subject with Code: - Theory of Machine -II (BTMEC504)

Marks: 60

Date:- 16/12/2019

Time:-3 Hr.

Instructions to the Students

- 1. Each question carries 12 marks.
- 2. Attempt any five questions of the following.
- 3. Illustrate your answers with neat sketches, diagram etc., wherever necessary.
- 4. If some part or parameter is noticed to be missing, you may appropriately Assume it and should mention it clearly

(Marks)

Que.1.

 $(2 \times 6 = 12)$

A) A pulley is driven by a flat belt, angle of lap being 120°. The belt is 100 mm wide by 6 mm thick and density 1000 kg/m³. If coefficient of friction is 0.3 & maximum stress in belt is not exceed 2 MPa. Find greatest power which the belt can transmit & corresponding speed of belt.

B) Explain centrifugal Tension in belt.

 $Que.2. (2\times6=12)$

- A) What do you understand by the term 'Interference' & 'undercutting' as applied to gears
- B) A pinion of 20 involutes teeth and 125mm pitch circle diameter drives a rack. The addendum of both pinion and rack is 6.25mm. What is the least pressure angle which can be used to avoid interference? With this pressure angle, find the length of the arc of contact and the minimum numbers of teeth in contact at a time.

Que.3. Attempt the following

A) Explain compound gear train with neat sketch.

(6)

B) In an epicyclic gear train, an arm carries two gears A and B having 36 and 45 teeth respectively. If the arm rotates at 150 rpm in the anticlockwise direction about the centre of the gear A which is fixed, determine the speed of gear B. If the gear A instead of being fixed, makes 300 rpm in the clockwise direction, what will be the speed of gear B. (6)

A) The turning moment diagram for a petrol engine is drawn to the following scales: Turning moment, 1 mm = 5 N-m Crank angle, 1 mm = 1°. The turning moment diagram repeats itself at every half revolution of the engine and the areas above and below the mean turning moment line taken in order are 295, 685, 40, 340, 960, 270 mm². The rotating parts are equivalent to a mass of 36kg at a radius of gyration of 150mm. Determine the coefficient of fluctuation of speed when the engine runs at 1800 r.p.m.

B) Explain the terms. i) Sensitiveness of governor. ii) Stability of governor.

iii) Isochronism. iv) Hunting of governor.

Que. 5.

 $(2 \times 6 = 12)$

- A) The mass of the turbine rotor of a ship is 20 tonnes and has a radius of gyration of 0.6m Its speed is 2000 r.p.m. The ship pitches 6° above and 6° below the horizontal position. The complete oscillation takes 30 seconds and the motion is simple harmonic. Determine the following. i) Maximum gyroscopic couple. ii) Maximum angular acceleration of the ship during pitching and iii) The direction in which the bow will tend to turn when rising, if the rotation of the rotor is clockwise when looking from the left.
- B) The turbine rotor of ship has a mass of 2000kg and rotates at a speed of 3000r.p.m. clockwise when looking from a stern. The radius of gyration of the rotor is 0.5m. Determine the gyroscopic couple and its effect upon the ship when the ship is steering to the right in curve of 100m radius at a speed of 16.1 knots (1 knot = 1855 m/h) calculate also the torque and its effects when the ship is pitching in simple harmonic motion, the bow falling with its maximum velocity. The period of pitching is 50 seconds and the total angular displacement between the two extreme positions of pitching is 12°. Find the maximum acceleration during pitching motion.

Que. 6. Solve the following.

A) Explain Rayleigh's method.

(6)

B) Explain and derive expression for critical or whirling speed of a shaft.

(6)
